

Definition with word answer at the end

- 1) Number that when added to another number gives zero as the sum.
- 2) Solid in which every face is a polygon.
- 3) A triangle in which no two sides are congruent.
- 4) $I = \text{Principal (times) rate (times) time}$.
- 5) Having two modes.
- 6) Divisions of the coordinate plane.
- 7) $ax + by = c$.
- 8) An angle measuring more than 180 degrees but less than 360 degrees.
- 9) Property that allows two factors to be written as a sum in multiplication.
- 10) In math, a statement that has been proven to be true.
- 11) The measure of volume.
- 12) Steepness and direction of a line from left to right.
- 13) Formula for the Pythagorean Theorem
- 14) In a circle, the distance from the center to any point on the circle.
- 15) Unit of measure for angles and arcs.
- 16) Forward movement of a line; the horizontal change.
- 17) Part of the circumference of a circle.
- 18) Metric system for measuring temperature.
- 19) Point at which a line in the coordinate plane crosses an axis.
- 20) In a numerical sequence, three dots meaning *and so on without end*.
- 21) System of measurement mostly used in the United States.
- 22) One-dimensional.
- 23) To test, or verify, a solution or the result of a calculation.

24) A value that does not change.

25) Amount of money on which interest is being paid.

26) Customary system for measuring temperature.

27) Angle in which the sides are radii of a circle and the vertex is the center.

28) Chance that an event will happen.
